

Project Plan: Root's Africa Storytelling and Social Media Strategy

A Clear Definition Of The Project:

The goal of the Social Media/Information Storytelling project for Roots Africa is to expand the organization's reach and engage a new audience through strategic content creation. Our client wants to improve their presence on LinkedIn, Instagram, Facebook, and Substack, shifting the focus from primarily college students to a broader demographic of 35 plus-year-olds. They believe this age group will contribute the most in terms of time and financial support.

To achieve this, our team will develop content that not only raises awareness about Roots Africa but also highlights the stories of its members and volunteers, showcasing the organization's impact on the communities it serves. The client has provided access to their social media accounts and shared insights into the advertising modules they currently use.

Through targeted social media strategies, we aim to effectively engage this new audience while authentically presenting the real people behind Roots Africa and the meaningful work they do.

A Brief Description Of All Expected Deliverables:

This project will encompass a strategic enhancement of Roots Africa's storytelling and digital presence. There will be various deliverables such as **a roadmap** depicting tasks, timelines, and milestones to show progress and changes of the project. Next, we will craft and implement **a social media strategy** for engaging the target audience on various platforms such as Instagram and TikTok. This will include analyzing different content types to see which works best, platform-specific strategies, and optimal posting schedules. In addition, we will prepare a detailed analysis of the **audience and engagement insights**. Moreover, we will show research findings on audience behaviors, preferences, and content effectiveness, with insights on how to engage older donors and corporate employees in donation-matching programs. Furthermore, we will also research the best ways for **metrics tracking**- to monitor key engagement. Lastly, we will provide **a final presentation and comprehensive final report** showing key findings, recommendations, and future implementation to the client for feedback.

A Summary Of All Of The Technical Requirements Needed To Address The Project Need And Meet All Of The Deliverables:

The Roots of Africa social media project will use Instagram, LinkedIn, and Facebook, with tools like Later or Beta Business Suite for scheduling. Canva will be the main platform for content creation, while Substack will handle newsletters. Social media insights and Google Analytics will track performance. Google Drive will store content, and Trello or Asana will help with task management. Audience feedback will be collected through Google Forms, and engagement will

be managed via comments and messages. Clear roles, brand consistency, and an approval process will ensure smooth execution.

A Summary Of The Critical Risks The Team Has Identified And Steps The Team Will Take To Mitigate Those Risks:

The team has identified a number of important risks as well as suggested solutions to mitigate these issues. First, the risk of low engagement on LinkedIn, Instagram, Facebook, and Substack is present. This will be addressed by using audience feedback systems and A/B testing to adjust content accordingly. Having multiple platforms can also create some challenges. We plan to use tools like Later for planning and designating certain team members to work on different platforms consistently. Since we are a little resource constrained, we will avoid using platforms like Twitter and TikTok. However, our attention will focus on maximizing the efficacy of the platforms we already use, such as Instagram and Facebook. Finally, another mitigation is tailoring content based on observations made of their behaviors.
